
DOT VAULTS

A crosschain multi asset vault built for defi on Polkadot.

OkAlice

Problem

Valuable NFT's or other digital assets such as LP tokens remain monofunctional from a defi perspective.

Solution

With DOT VAULTS these assets can be combined in one single vault and deployed as collateral, and as such become dynamic defi assets.

OkAlice

Assets & vault logic

For this hackathon we have focused on two assets ERC 721 and psp 22 tokens using XVM on the Astar network

We haven't implemented any logic related to margin calls, interests etc.

OkAlice

Future of Dot Vaults

- Writing logic for margin calls and
- Using proxy rights for NFT's and LP tokens, such as airdrops or LP yield.
